

# **ECE441 – Microcomputers**

## **Course Policies and Syllabus**

### **Instructor**

Dr. Jafar Saniie

Office: Siegel Hall 103

Office Hours: Monday and Wednesday 12:45 PM – 1:30 PM

### **Teaching Assistant**

Won-Jae Yi ([wyi3@iit.edu](mailto:wyi3@iit.edu))

Office: Siegel Hall 308A

Office Hours: Monday and Wednesday 2:00 PM – 3:00 PM

### **Textbooks:**

MC68000 Microprocessor Programmer's Reference Manual

SANPER-1 Lab Manual and Course Notes

MC68000 Educational Computer Board User's Manual

### **References:**

Microprocessor System Design - 68000 Hardware, Software and Interfacing  
by A. Clements

The Motorola MC68000 Microprocessor Family, Assembly Language,  
Interface Design, and System Design by T.L. Harman and D.T. Hein

### **Goals:**

To introduce students to the fundamentals of computer architecture, microprocessors, and hardware design. In particular, this course will teach students skills needed to design, implement, test and troubleshoot microprocessor based hardware and software. Weekly design projects reinforce the concepts taught in the classroom and give students hands on experience.

### **Prerequisites:**

ECE 218, ECE 242, CS 350 or CS 470 (Familiarity with digital logic, basic electronics, assembly language programming, and ability to work with assembler and simulator software)

### **Grading:**

<b>Midterm</b>	<b>25%</b>	<b>(Monday, March 9)</b>
<b>Final Exam</b>	<b>30%</b>	
<b>Labs</b>	<b>20%</b>	
<b>Design Project</b>	<b>20%</b>	
<b>Technology Impact Project</b>	<b><u>5%</u></b>	
<b>Total</b>	<b>100%</b>	

### **Holidays:**

MLK Day (January 19), Spring Break (March 16 – March 20)

### **Note:**

**Labs begin January 20**

## **ECE441 – Microcomputers**

### **Course Policies and Syllabus**

1. Importance of the microcomputer and recent developments in microprocessor design (3 classes)
2. MC68000 Architecture, pin functions, instructions and addressing (3 classes)
3. Interrupt handling, exception processing, and function controls (6 classes)
4. Timing of address, data and control signals (3 classes)
5. Memory Design (3 classes)
6. Input / Output Design (3 classes)
7. Synchronous bus control signals (3 classes)
8. Design with programmable input/output device (6 classes)
9. Design with Asynchronous programmable input/output device (6 classes)
10. Hardware design for reset, bus timeout logic and interrupts (6 classes)
11. Tests (3 classes)

### **Computer Usage**

Students use SANPER-1 Educational Computer Board, MC68000 assembler and simulator software to implement and test their projects.

### **Laboratory Projects**

1. Introduction to SANPER-1 Microcomputer architecture and TUTOR Resident Monitor program
2. Tutor command utilization and program development
3. Interrupts and exception processing
4. Code conversion, bit manipulation, and software development
5. Design memory hardware and bus cycle timing
6. Design input/output hardware and interrupt logic
7. Design with the programmable parallel input/output device
8. Design with the programmable asynchronous serial input/output device
9. Design and implement a **monitor software project**
